## HABARI CLOUD SERVICES [HCS]

## MINIMIZE RISK. MAXIMIZE VALUE

### Closer. Faster. Priced Competitively

HCS is a solid cloud platform built on latest cutting-edge hardware and OpenStack - a secure, scalable open-source software platform for cloud computing. Habari Cloud Services helps you better manage modern IT environments, while freeing up IT resources and business capital associated with maintaining servers and deploying applications on-site.

Focus on what you are good at - your real business, and let Habari Cloud Services take the worry of IT infrastructure and application hosting. Minimize Risk. Maximize Value with HCS.

## SERVICES

### HCS SS

HCS Store & Sync stores data redundantly in distinct locations. You can access & sync files, contacts calendars and bookmarks across multiple devices just like in dropbox, Google Drive, etc but with greater speed. You decide what happens with your data, where it is and who can access it.

### HCS RR

Make HCS Rapid Restore your contingency plan. Quickly get back to normal operations by rapidly restoring files after a system failure or file loss.

### HCS OO

Create, edit documents and collaborate using HCS Online Office in the same way you would do using Google Docs but on a more intuitive interface. OO enables you to manage documents, projects, teams and customer relations in one place. You can also integrate it with your SS account.

### HCS VPS

Enter the cloud with your Virtual Private Server. HCS VPS offers more server power than shared hosting yet costs considerably less than investing on a hardware server on site. ||Dedicated RAM || Full Root Access || Redundant & Secure|| Linux & Windows OS ||
